

Installation procedure

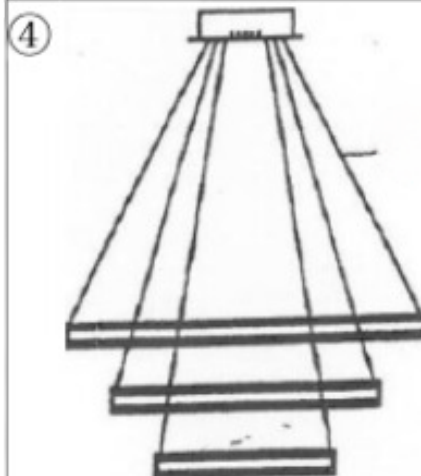

1. Use the cross-hanging wrench on the ceiling to mark the self-tapping screw holes to be drilled, and then hammer the expansion tube into the ceiling.

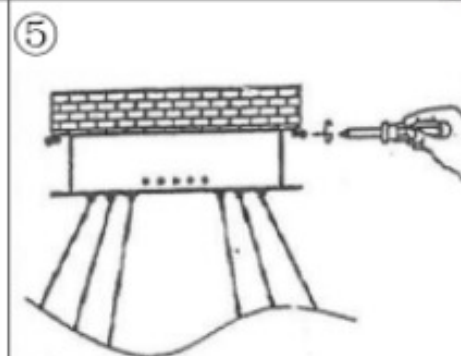

2. Use the self-tapping screws to secure the hanging wrench inside the ceiling expansion tube. Use a screwdriver to tighten the lower retaining screw.

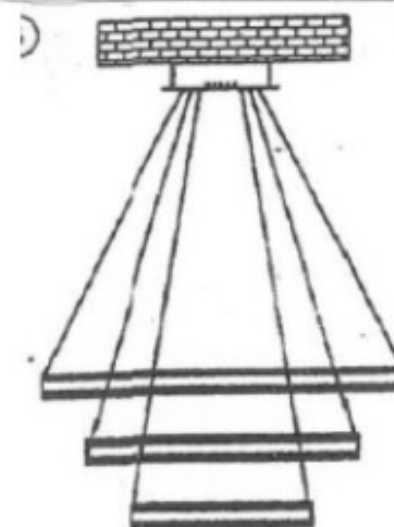

3. The wires in the ceiling and lamps and lanterns zero wire, fire wire to fire wire, ground wire to ground wire are connected, and then tighten the wire with the wiring cap and tie with rolling tape.

4. Adjust the length of the wire rope to adjust the light body at the right height.

5. Place the ceiling plate against the ceiling, align the side holes of the suction pre-disc and the cross hole of the hanging plate, use a screwdriver to screw the round head screws into the screw holes of the hanging plate, lock.

Precautions

1. Before installation, please check that the spare parts are complete and the lamps are intact
2. Turn off the power before installing and then wiring
3. When installing the bulb, please use the bulb lower than the wattage indicated on the lamphed label
4. Installation and maintenance should be performed by professional technicians
